AOPi Sorority – University of Florida
Licensed Design Professional Comments

To whom it may concern,

Our challenge as design professionals is to review each project and evaluate the unique opportunities and challenges that project may have. We strive to provide a desired solution that meets the functional and financial needs of our client as well as meets the requirements of the various building codes that are in place. Some projects are more challenging than others. This project has several challenges that are coming from the University of Florida's ADA Coordinator, Arborist and Parking/Traffic approvals. I believe that our proposed design provides a solution that meets the goals of all the challenges stated above. The proposed plan allows the AOPi Chapter at the University of Florida to keep their existing required parking, provide the new Accessible Sleeping Rooms and an Accessible Bathroom and Shower area on the Main Level where all the primary functions of the Sorority are, and attempt to avoid the root structure of the 41" Heritage Live Oak Tree.

Please feel free to contact me if you have any questions.

Thank you for your consideration.

Best Regards,
Mike Hug
