

Chris,

Please see attached drawing and information for our machine-room-less elevator. Note, the machine is located in the pit and the controller is located in the front wall at the 2nd landing. For this application the front wall of the hoistway need to remain open for the elevator installation. TKE provides the 110V and 3phase disconnects and pit ladder. Budget cost to provide and install a 2500# cab, 10' to 12' floor to floor, approx. \$57,000. Please let me know if you have any questions.

Thank You

Dan Cook
