Florida Building Code, 8th Edition (2023) - Energy Conservation. Filing Version - Not for Compliance Submission EnergyGauge Summit® Fla/Com-2023, Effective Date: Dec 31, 2023

C402.1.5: FBC Component Performance Alternative Option

Building envelope values and fenestration areas determined in accordance with Equation 4-2 in lieu of compliance with the U-, F- and C-factors in Tables C402.1.4 and C402.4 and the maximum allowable fenestration areas in Section C402.4.1

	Check List
Applica include	ations for compliance with the Florida Building Code, Energy Conservation shall e:
	The full compliance report generated by the software that contains the project summary, compliance summary, certifications and detailed component compliance reports.
	The compliance report must include the full input report generated by the software as contigous part of the compliance report.
	Boxes appropriately checked in the Mandatory Section of the complaince report.

PROJECT SUMMARY

Requirements compiled by US Department of Energy and Pacific Northwest National Laboratory. Adopted for FBC with permission. Not all may be applicable

Торіс	Section	Component	-	Yes	N/A	Exempt
	1. To	be checked	by Designer or Engineer			
6013 Insulation	C303.2	Envelope	Below-grade wall insulation installed per manufacturer's instructions.			
6014 Insulation	C303.2	Envelope	Slab edge insulation installed per manufacturer's instructions.			
6015 Insulation	C303.2	Envelope	Above-grade wall insulation installed per manufacturer's instructions.			
6033 Insulation	C402.3	Envelope	High-albedo roofs satisfy one of the following: 3-year-aged solar reflectance >= 0.55 and thermal emittance >= 0.75 or 3-year-aged solar reflectance index >= 64.0.			
6055 Fenestration	C402.4.4	Envelope	U-factor of opaque doors associated with the building thermal envelope meets requirements.			
6118 HVAC	C403.2.7	Mechanical	Exhaust air energy recovery on systems meeting Table C403.2.7(1) and C403.2.7(2).			
6130 HVAC	C403.2.4.8	Mechanical	HVAC systems serving guestrooms in Group R-1 buildings with > 50 guestrooms: Each guestroom is provided with controls that automatically manage temperature setpoint and ventilation (see sections C403.2.4.8.1 and C403.2.4.8.2).			
6139 SYSTEM_SPECIF	C403.3, C403.3.1, C403.3.2	Mechanical	Air economizers provided where required, meet the requirements for design capacity, control signal, ventilation controls, high-limit shut-off, integrated economizer control, and provide a means to relieve excess outside air during operation.			
6147 SYSTEM_SPECIF	C403.3.2	Mechanical	Economizer operation will not increase heating energy use during normal operation.			
6148 SYSTEM_SPECIF	C403.3.3.3	Mechanical	Air economizers automatically reduce outdoor air intake to the design minimum outdoor air quantity when outdoor air intake will not reduce cooling energy usage. See Table C403.3.3.3 for			
6149 SYSTEM_SPECIF	C403.3.3.4	Mechanical	applicable device types and climate zones. System capable of relieving excess outdoor air during air economizer operation to prevent overpressurizing the building. The relief air outlet			
6150 SYSTEM_SPECIF	C403.3.3.5	Mechanical	located to avoid recirculation into the building. Return, exhaust/relief and outdoor air dampers used in economizers have motorized dampers that automatically shut when not in use and meet maximum leakage rates. Reference section			
6151 SYSTEM_SPECIF	C403.3.4.1, C403.3.4.2,	Mechanical	C403.2.4.3 for details. Water economizers provided where required, meet the requirements for design capacity, maximum pressure drop and integrated			
6157 SYSTEM_SPECIF	C403.3.1 C403.4.2.1	Mechanical	economizer control. Three-pipe hydronic systems using a common return for hot and chilled water are not used.			
6172 SYSTEM_SPECIF	C403.4.2.3.1	Mechanical	Hydronic heat pump systems connected to a common water loop meet heat rejection and heat			
6173 SYSTEM_SPECIF	C403.4.3.2	Mechanical	addition requirements. Multiple-cell heat rejection equipment with variable speed fan drives are controlled to operate the maximum number of fans allowed and so that all fans operate at the same fan speed required for the instantaneous cooling duty. The minimum fan speed will be the minimum allowable speed of the fan drive system in accordance with the manufacturer's recommendations.			

6176 SYSTEM_SPECIF	C403.4.3.4	Mechanical	Open-circuit cooling towers having water cooled chiller systems and multiple or vairable speed condenser pumps, are designed so that tower		
6177 SYSTEM_SPECIF	C403.4.4	Mechanical	cells can run in parallel with larger of flow crtieria. Supply air systems serving multiple zones have VAV systems with controls configured to reduce the volume of air that is reheated, recooled or		
6179 SYSTEM_SPECIF	C403.4.4.1	Mechanical	mixed in each zone. See section for details. Single-duct VAV systems use terminal devices configured to reduce the supply of primary supply		
6180 SYSTEM_SPECIF	C403.4.4.2	Mechanical	air before reheating or recooling takes place. Systems that have 1 warm air duct and 1 cool air duct use terminal devices configured to reduce the flow from one duct to a minimum before		
6181 SYSTEM_SPECIF	C403.4.4.3	Mechanical	mixing of air from the other duct takes place. Individual dual-duct or mixing heating and cooling systems with a single fan and with total capacities > 90,000 Btu/h not equipped with air		
6198 SYSTEM_SPECIF	C404.2	Mechanical	economizers. Service water heating equipment meets efficiency requirements.		
6288 SYSTEM_SPECIF	Table_C403.3.2(8)a	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=40.2 gpm/hp .		
6289 SYSTEM_SPECIF	Table_C403.3.2(8)b	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=20.0 gpm/hp.		
6290 SYSTEM_SPECIF	Table_C403.3.2(8)c	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=16.1 gpm/hp.		
6291 SYSTEM_SPECIF	Table_C403.3.2(8)d	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=7.0 gpm/hp		
6292 SYSTEM_SPECIF	Table_C403.3.2(8)e	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=134 kBtu/h-hp w/ Ammonia test		
6293 SYSTEM_SPECIF	Table_C403.3.2(8)f	Mechanical	fluid. Heat Rejection Equipment: Minimum Efficiency Requirement >=110 kBtu/h-hp w/ Ammonia test fluid.		
6294 SYSTEM_SPECIF	Table_C403.3.2(8)g	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=157 kBtu/h-hp w/ R-507A test fluid.		
6295 SYSTEM_SPECIF	Table_C403.3.2(8)h	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=135 kBtu/h-hp w/ R-507A test fluid.		
6296 SYSTEM_SPECIF	Table_C403.3.2(8)i	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=176 kBtu/h-hp.		
6297 SYSTEM_SPECIF	C403.2.12.1	Mechanical	HVAC fan systems at design conditions do not exceed allowable fan system motor nameplate hp or fan system bhn		
6300 SYSTEM_SPECIF	C403.2.12.2	Mechanical	or fan system bhp. HVAC fan motors not oversized beyond allowable limits.		
6301 SYSTEM_SPECIF	C403.2.12.3	Mechanical	Fans have efficiency grade (FEG) >= 67. The total efficiency of the fan at the design point of operation <= 15% of maximum total efficiency of the fan.		
6308 SYSTEM_SPECIF	C403.2.12.4	Mechanical	Motors for fans that are not less than 1/12 hp and less than 1 hp are electronically commutated motors or have a minimum motor efficiency of 70 percent. These motors have the means to adjust		
6312 SYSTEM_SPECIF	C403.2.12.5	Mechanical	motor speed. Each DX cooling system > 65 kBtu and chiller water/evaporative cooling system with fans > 1/4 hp are designed to vary the indoor fan airflow as a function of load and comply with detailed requirements of this section.		
2. To be checked by Plan Reviewer					
6001 Plan Review	C103.2	Envelope	Plans and/or specifications provide all information with which compliance can be determined for the building envelope and document where exceptions to the standard are claimed.

6027 Insulation	C402.2.5	Envelope	ballasts, transformers and control devices. Slab edge insulation depth/length. Slab insulation extending away from building is covered by	
6028 Insulation	C402.2.4	Envelope	pavement or >= 10 inches of soil. Installed floor insulation type and R-value consistent with insulation specifications reported	
6029 Insulation	C402.2.6	Project	in plans and COMcheck reports. Radiant heating systems panels insulated to >=R-3.5 on face opposite space being heated.	
6030 HVAC	C402.2.6	Mechanical	Thermally ineffective panel surfaces of sensible heating panels have insulation >= R-3.5.	
6031 Insulation	C402.2.6	Envelope	Radiant panels and associated components, designed for heat transfer from the panel surfaces to the occupants or indoor space are insulated with a minimum of R-3.5.	
6066 Air Leakage	C402.5.7	Envelope	Vestibules are installed on all building entrances. Doors have self-closing devices.	
6083 HVAC	C403.2.13	Mechanical	Systems that heat outside the building envelope are radiant heat systems controlled by an	
6096 HVAC	C403.2.4.2	Mechanical	occupancy sensing device or timer switch. Each zone equipped with setback controls using automatic time clock or programmable control	
6097 HVAC	C403.2.4.2	Mechanical	system. Each zone equipped with setback controls using automatic time clock or programmable control	
6098 HVAC	C403.2.4.2	Mechanical	system. Each zone equipped with setback controls using automatic time clock or programmable control	
6101 SYSTEM_SPECIF	C403.2.4.4	Mechanical	system. Zone isolation devices and controls installed where applicable.	
6104 SYSTEM_SPECIF	C403.2.4.4	Mechanical	Zone isolation devices and controls installed where applicable.	
6106 SYSTEM_SPECIF	C403.2.4.7	Mechanical	Fault detection and diagnostics installed with air-cooled unitary DX units having economizers.	
6107 SYSTEM_SPECIF	C403.2.5	Mechanical	Hot water boilers supplying heat via one- or two-pipe systems include outdoor setback control.	
6108 HVAC	C403.2.6	Mechanical	Natural or mechanical ventilation is provided in accordance with International Mechanical Code Chapter 4. Mechanical ventilation has capability to reduce outdoor air supply to minimum per IMC Chapter 4.	

6109 HVAC	C403.2.6.1	Mechanical	Demand control ventilation provided for spaces >500 ft2 and >25 people/1000 ft2 occupant			
			density and served by systems with air side economizer, auto modulating outside air damper			
6153 SYSTEM SPECIF	C403 2 12 5 1	Mechanical	control, or design airflow >3,000 cfm. Hydronic and multizone HVAC system controls			
	0.00012.02.0001	moonamoai	are VAV fans driven by mechanical or electrical			
6155 SYSTEM_SPECIF	C403.2.12.5.3	Mechanical	variable speed drive per Table C403.2.12.5. Reset static pressure setpoint for DDC controlled			
			VAV boxes reporting to central controller based on the zones requiring the most pressure.			
6156 SYSTEM_SPECIF	C403.4.2	Mechanical	The heating of fluids in hydronic systems that			
			have been previously mechanically cooled, and the cooling of fluids that have been previously			
			mechanically heated are limited in accordance			
			with Sections C403.4.2.1-C403.4.2.3. Single boiler systems >500,000 Btu/h have multistaged			
6159 SYSTEM_SPECIF	C403 4 2 3 2	Mechanical	or modulating burner. Closed-circuit cooling tower within heat pump loop			
	0+00.+.2.0.2	Weenamour	have either automatic bypass valve or lower			
			leakage positive closure dampers. Open-circuit tower within heat pump loop have automatic valve			
			to bypass all heat pump water flow around the			
			tower. Open- or closed-circuit cooling towers used in conjunction with a separate heat exchanger			
			have heat loss by shutting down the circulation pump on the cooling tower loop. Open- or closed			
			circuit cooling towers have a separate heat			
			exchanger to isolate the cooling tower from the heat pump loop, and heat loss is controlled by			
			shutting down the circulation pump on the cooling tower loop.			
6162 SYSTEM_SPECIF	C403.4.2.4	Mechanical	Hydronic systems greater than 500,000 Btu/h			
			designed for variable fluid flow. See section language for full details.	_	_	
6167 SYSTEM_SPECIF	C403.4.2.5	Mechanical	System turndown requirement met through multiple single-input boilers, one or more			
			modulating boilers, or a combination of			
			single-input and modulating boilers. Boiler input between 1.0 MBtu/h and 5 MBtu/h			
			has 3:1 turndown ratio, boiler input between 5.0 MBtu/h and 10 MBtu/h has 4:1 turndown ratio,			
	C 402 4 2 C	Maakariari	boiler input > 10.0 MBtu/h has 5:1 turndown ratio.			
6168 SYSTEM_SPECIF	0403.4.2.0	Mechanical	Chilled water plants with multiple chillers have capability to reduce flow automatically through the	Ш		
			chiller plant when a chiller is shut down. Boiler plants with multiple boilers have the			
			capability to reduce flow automatically through the			
6169 SYSTEM_SPECIF	C403.4.3.1	Mechanical	boiler plant when a boiler is shut down. Fan systems with total system motor capacity >=5			
			hp associated with heat rejection equipment configured to automatically modulate the fan			
			speed to control the leaving fluid temperature or			
			condensing temp/pressure of heat rejection device.			
6174 SYSTEM_SPECIF	C403.4.3.3	Mechanical	Centrifugal fan open-circuit cooling towers having			
			combined rated capacity >= 1100 gpm meets minimum efficiency requirement: >=40.2 gpm/hp.	_		_
6182 SYSTEM_SPECIF	C403.4.4.5	Mechanical	Multiple zone HVAC systems have supply air temperature reset controls.		Ш	
6186 SYSTEM_SPECIF	C403.4.4.6	Mechanical	Multiple zone VAV systems with DDC of individual			
			zone boxes have static pressure setpoint reset controls.			-

6199 SYSTEM_SPECIF		Mechanical	Gas-fired water-heating equipment installed in new buildings: where a singular piece of water-heating equipment >= 1,000 kBtu/h serves the entire building, thermal efficiency >= 90 Et. Where multiple pieces of water-heating equipment serve the building with combined rating >= 1,000 kBtu/h, the combined input-capacity-weighted-average thermal efficiency >= 90 Et. Exclude input rating of equipment in individual dwelling units and equipment <= 100 kBtu/h. Gas-fired water-heating equipment installed in new buildings: where a singular piece of water-heating equipment >= 1,000 kBtu/h serves the entire building, thermal efficiency >= 90 Et. Where multiple pieces of water-heating equipment serve the building with combined rating >= 1,000 kBtu/h, the combined input-capacity-weighted-average thermal efficiency >= 90 Et. Exclude input rating of equipment in individual	
6203 SYSTEM_SPECIF	C404.4	Mechanical	dwelling units and equipment <= 100 kBtu/h. All piping insulated in accordance with section details and Table C403.2.10.	
6204 SYSTEM_SPECIF	C404.5, C404.5.1, C404.5.2	Mechanical	Heated water supply piping conforms to pipe length and volume requirements. Refer to section details.	
6207 SYSTEM_SPECIF	C404.6.3	Mechanical	Pumps that circulate water between a heater and storage tank have controls that limit operation from startup to <= 5 minutes after end of heating	
6208 SYSTEM_SPECIF	C404.7	Mechanical	cycle. Demand recirculation water systems have controls that start the pump upon receiving a signal from the action of a user of a fixture or appliance and limits the temperature of the water	
6239 Wattage	C405.4.1	Exterior Lighting	entering the cold-water piping to 104°F. Exterior lighting power is consistent with what is shown on the approved lighting plans, demonstrating proposed watts are less than or equal to allowed watts.	
6240 Plan Review	C405.5.2	Project	Group R-2 dwelling units have separate electrical meters.	
6241 Plan Review	C406	Project	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the additional energy efficiency package options.	
6250 SYSTEM_SPECIF	C408.2.2.2	Mechanical	HVAC hydronic heating and cooling coils have means to balance and have pressure test connections.	
		3. To be che	ecked by Inspector	
6006 Insulation	C303.1	Envelope	Roof insulation installed per manufacturer's instructions. Blown or poured loose-fill insulation is installed only where the roof slope is <=3 in 12.	
6007 Insulation	C303.1	Envelope	Building envelope insulation is labeled with R-value or insulation certificate providing R-value	
6008 Insulation	C402.2.2	Envelope	and other relevant data. Insulation installed on a suspended ceiling having ceiling tiles is not being specified for roor/ceiling assemblies. Continuous insulation board installed in 2 or more layers with edge joints offset between layers.	
6009 Insulation	C402.2.2	Envelope	Skylight curbs are insulated to the level of roofs with insulation above deck or R-5.	
6011 Fenestration	C303.1.3	Envelope	Fenestration products rated in accordance with NFRC.	
6016 Insulation	C303.2, C402.2.5	Envelope	Floor insulation installed per manufacturer's instructions. Cavity or structural slab insulation installed in permanent contact with underside of decking or structural slabs.	

6019 Insulation	C303.2.1	Envelope	Exterior insulation protected against damage, sunlight, moisture, wind, landscaping and	
6020 Insulation	C303.2.1	Envelope	equipment maintenance activities. Exterior insulation is protected from damage with a protective material. Verification for exposed	
			foundation insulation may need to occur during	
6022 Inculation	C402.1.2	Envelope	Foundation Inspection.	
6023 Insulation	C402.1.3	Envelope	Non-swinging opaque doors have R-4.75 insulation.	
6025 Insulation	C104	Envelope	Installed above-grade wall insulation type and	
			R-value consistent with insulation specifications reported in plans and COMcheck reports.	
6026 Insulation	C104	Envelope	Installed slab-on-grade insulation type and	
			R-value consistent with insulation specifications reported in plans and COMcheck reports.	
6048 Insulation	C104	Envelope	Installed roof insulation type and R-value	
			consistent with insulation specifications reported in plans and COMcheck reports. For some ceiling	
			systems, verification may need to occur during	
6056 Air Leakage	C402.5	Envelope	Framing Inspection. Building envelope contains a continuous air	
		· F -	barrier that has been tested and deemed to limit	
6057 Air Leakage	C402.5.1	Envelope	air leakage <= 0.40 cfm/ft2. The building envelope contains a continuous air	
g-			barrier that is sealed in an approved manner and	
			either constructed or tested in an approved manner. Air barrier penetrations are sealed in an	
			approved manner.	
6058 Air Leakage	C402.5.1.1	Envelope	All sources of air leakage in the building thermal envelope are sealed, caulked, gasketed, weather	
			stripped or wrapped with moisture	
			vapor-permeable wrapping material to minimize air leakage.	
6059 Air Leakage	C402.5.1.2.1	Envelope	The building envelope contains a continuous air	
			barrier that is sealed in an approved manner and material permeability <= 0.004 dfm/ft2. Air barrier	
			penetrations are sealed in an approved manner.	
6060 Air Leakage	C402.5.1.2.2	Envelope	The building envelope contains a continuous air barrier that is sealed in an approved manner and	
			average assembly air leakage <= 0.04 cfm/ft2.	
			Air barrier penetrations are sealed in an approved manner.	
6061 Air Leakage	C402.5.2, C402.5.4	Envelope	Factory-built fenestration and doors are labeled	
			as meeting air leakage requirements.	
6064 Air Leakage	C402.5.5, C403.2.4.3	Envelope	Stair and elevator shaft vents have motorized dampers that automatically close. Refernece	
0005 4: : :			section C403.2.4.3 for operational details.	
6065 Air Leakage	C402.5.6	Envelope	Weatherseals installed on all loading dock cargo door openings and provide direct contact along	$\Box \sqcup \Box$
			the top and sides of vehicles parked in the	
6073 Air Leakage	C402.5.6	Envelope	doorway. Weatherseals installed on all loading dock cargo	
3-	-	1 -	door openings and provide direct contact along	
			the top and sides of vehicles parked in the doorway.	
6074 Air Leakage	C402.5.8	Envelope	Recessed luminaires in thermal envelope to limit	
			infiltration and be IC rated and labeled. Seal between interior finish and luminaire housing.	
6075 HVAC	C403.2.1	Mechanical	HVAC systems and equipment design loads	
			calculated in accordance with ANSI/ASHRAE/ACCA Standard 183 or by an	
	0.400.0.46		approved equivalent computational procedure	
6076 SYSTEM_SPECIF	6403.2.10	Mechanical	HVAC piping insulation insulated in accordance with Table C403.2.10. Insulation exposed to	
			weather is protected from damage and is provided	
6086 HVAC	C403.2.3	Mechanical	with shielding from solar radiation. HVAC equipment efficiency verified.	
6087 SYSTEM_SPECIF	C403.2.3	Mechanical	PTAC and PTHP with sleeves 16 in. by 42 in.	
			labeled for replacement only as per Footnote b to Table C403.2.3(3).	

6090 SYSTEM_SPECIF	C403.2.3	Mechanical	Centrifugal fan open-circuit cooling towers having	ппп
6091 SYSTEM_SPECIF	C403.2.4.1	Mechanical	combined rated capacity >= 1100 gpm meets minimum efficiency requirement: >=38.2 gpm/hp. Heating and cooling to each zone is controlled by	
			a thermostat control. Minimum one humidity control device per installed humidification/dehumidification system.	
6092 SYSTEM_SPECIF	C403.2.4.1.1	Mechanical	Heat pump controls prevent supplemental electric resistance heat from coming on when not needed.	
6093 HVAC	C403.2.4.1.2	Mechanical	Thermostatic controls have a 5 °F deadband.	
6094 HVAC	C403.2.4.1.2	Mechanical	Thermostatic controls have a 5 °F deadband.	
6095 HVAC	C403.2.4.1.3	Mechanical	Temperature controls have setpoint overlap restrictions.	
6099 HVAC	C403.2.4.2.1, C403.2.4.2.2	Mechanical	Automatic Controls: Setback to 55°F (heat) and 85°F (cool); 7-day clock, 2-hour occupant override, 10-hour backup	
6100 SYSTEM_SPECIF	C403.2.4.2.3	Mechanical	Systems include optimum start controls.	
6105 HVAC	C403.2.4.5, C403.2.4.6	Mechanical	Snow/ice melting system and freeze protection systems have sensors and controls configured to limit service for pavement temperature and outdoor temperature. future connection to controls.	
6115 HVAC	C403.2.6.2	Mechanical	Enclosed parking garage ventilation has automatic contaminant detection and capacity to stage or modulate fans to 50% or less of design capacity.	
6131 Air Leakage	C403.2.4.3	Mechanical	Outdoor air and exhaust systems have motorized dampers that automatically shut when not in use and meet maximum leakage rates. Check gravity dampers where allowed. Reference section language for operational details.	
6136 HVAC	C403.2.9.1, C403.2.9.2	Mechanical	HVAC ducts and plenums insulated in accordance with C403.2.9.1 and constructed in accordance with C403.2.9.2, verification may need to occur during Foundation Inspection.	
6154 SYSTEM_SPECIF	C403.2.12.5.2	Mechanical	VAV fans have static pressure sensors located so controller setpoint <=1.2 w.c	
6158 SYSTEM_SPECIF	C403.4.2.2	Mechanical	Two-pipe hydronic systems using a common distribution system have controls to allow a deadband >=15 °F, allow operation in one mode for at least 4 hrs before changeover, and have rest controls to limit heating and cooling supply temperature to <=30 °F.	
6161 SYSTEM_SPECIF	C403.4.2.3.3	Mechanical	Two-position automatic valve interlocked to shut off water flow when hydronic heat pump with	
6189 SYSTEM_SPECIF	C403.4.4.7	Mechanical	pumping system >10 hp is off. Parallel-flow fan-powered VAV air terminals have automatic controls configured to 1) turn off the terminal fan except when space heating is required or where required for ventilation, 2) turn	
6190 SYSTEM_SPECIF	C403.2.12.5.3	Mechanical	on the terminal fan as the first stage of heating before the heating coil is activated, and 3) during heating for warmup or setback temperature control, either operate the terminal fan and heating coil without primary air or, reverse the terminal damper logic and provide heating from the central air handler by primary air. Systems with DDC of individual zones reporting to the central control panel configured to reset the static pressure setpoint based on zone requiring the most pressure. The DDC is capable of monitoring zone damper positions or have an alternative method of indicating the need for static pressure. See section for details.	

(
6191 SYSTEM_SPECIF	C403.2.12.5.2	Mechanical	Static pressure sensors used to control VAV fans located such that the controller setpoint is <= 1.2 inches w.c Where this results in one or more sensors being located downstream of major duct splits, not less than one sensor located on each major branch.	
6192 SYSTEM_SPECIF	C403.4.5	Mechanical	Condenser heat recovery system that can heat water to 85 °F or provide 60% of peak heat rejection is installed for preheating of service hot water.	
6197 SYSTEM_SPECIF	C403.4.6	Mechanical	Hot gas bypass limited to: <=240 kBtu/h – 50% >240 kBtu/h – 25%	
6201 SYSTEM_SPECIF	C404.3	Mechanical	Heat traps installed on supply and discharge piping of non-circulating systems.	
6205 SYSTEM_SPECIF	C404.6.1	Mechanical	Controls are installed that limit the operation of a recirculation pump installed to maintain temperature of a storage tank. System return pipe is a dedicated return pipe or a cold water supply	
6206 SYSTEM_SPECIF	C404.6.1, C404.6.2	Mechanical	pipe. Automatic time switches installed to automatically switch off the recirculating hot-water system or heat trace.	
6209 SYSTEM_SPECIF	C404.9.1	Mechanical	Pool heaters are equipped with on/off switch and no continuously burning pilot light.	
6210 SYSTEM_SPECIF	C404.9.2	Mechanical	Time switches are installed on all pool heaters and pumps.	
6213 SYSTEM_SPECIF	C404.9.3	Mechanical	Vapor retardant pool covers are provided for heated pools and permanently installed spas.	
6215 Controls	C405.2.1, C405.2.1.1	Interior Lighting	Occupancy sensors installed in classrooms/lecture/training rooms, conference/meeting/multipurpose rooms, copy/print rooms, lounges/breakrooms, enclosed offices, open plan office areas, restrooms, storage rooms, locker rooms, warehouse storage areas, and other spaces <= 300 sqft that are enclosed by floor-to-ceiling height partitions. Reference section language C405.2.1.2 for control function in warehouses and section C405.2.1.3 for open	
6220 Controls	C405.2.1.2	Interior Lighting	plan office spaces. Occupancy sensors control function in warehouses: In warehouses, the lighting in aisleways and open areas is controlled with occupant sensors that automatically reduce lighting power by 50% or more when the areas are unoccupied. The occupant sensors control lighting in each aisleway independently and do not control lighting beyond the aisleway being	
6221 Controls	C405.2.1.3	Interior Lighting	controlled by the sensor. Occupant sensor control function in open plan office areas: Occupant sensor controls in open office spaces >= 300 sq.ft. have controls 1) configured so that general lighting can be controlled separately in control zones with floor areas <= 600 sq.ft. within the space, 2) automatically turn off general lighting in all control zones within 20 minutes after all occupants have left the space, 3) are configured so that general lighting power in each control zone is reduced by >= 80% of the full zone general lighting power within 20 minutes of all occupants leaving that control zone, and 4) are configured such that any daylight responsive control will activate space general lighting or control zone general lighting only when occupancy for the same area is	
6222 Controls	C405.2.2, C405.2.2.1, C405.2.2.2	Interior Lighting	detected. Each area not served by occupancy sensors (per C405.2.1) have time-switch controls and functions detailed in sections C405.2.2.1 and C405.2.2.2.	

6225 Controls	C405.2.2.2	Interior Lighting	Spaces required to have light-reduction controls have a manual control that allows the occupant to reduce the connected lighting load in a reasonably uniform illumination pattern >= 50	
6228 Controls	C405.2.3, C405.2.3.1, C405.2.3.2	Interior Lighting	percent. Daylight zones provided with individual controls that control the lights independent of general area lighting. See code section C405.2.3 Daylight-responsive controls for applicable spaces, C405.2.3.1 Daylight responsive control function and section C405.2.3.2 Sidelit zone.	
6233 Controls	C405.2.4	Interior Lighting	Separate lighting control devices for specific uses installed per approved lighting plans.	
6234 Wattage	C405.2.4	Interior Lighting	Additional interior lighting power allowed for special functions per the approved lighting plans and is automatically controlled and separated from general lighting.	
6235 Controls	C405.2.6	Exterior Lighting	Exterior lighting systems shall be provided with controls that comply with Sections C405.2.6.1 through C405.2.6.4. Decorative lighting systems shall comply with Sections C405.2.6.1, C405.2.6.2, and C405.2.6.4.	
6238 Wattage	C405.3.1	Interior Lighting	Interior installed lamp and fixture lighting power is consistent with what is shown on the approved lighting plans, demonstrating proposed watts are	
6242 Mandatory Additior	C406.4	Project	less than or equal to allowed watts. Enhanced digital lighting controls efficiency package: Interior lighting has following enhanced lighting controls in accordance with Section C405.2.2: Luminaires capable of continuous dimming and being addressed individually, <= 8 luminaires controlled in combination in a daylight zone, digital control system for fixtures, "Sequence of Operations" documentation, and functional testing per Section C408.	
6244 Mandatory Additior	C406.6	Project	Dedicate outdoor air system efficiency package : Buildings with hydronic and/or multiple-zone HVAC systems are equipped with an independent ventilation system designed to provide >= 100-percent outdoor air to each individual occupied space, as specified by the IMC. The ventilation system is capable of total energy recovery and includes HVAC system controls that manage temperature resets >= 25 percent of delta design supply-air / room-air temp. Reference section C406.6 for qualifying systems/equipment.	
6245 Mandatory Additior	C406.7, C406.7.1	Project	Enhanced Service Water Heat Systems/equipment. Enhanced Service Water Heat System efficiency package. One of the following SWH system enhancements must satisfy 60 percent of buildings annual hot water requirements, or 100 percent if the building requirements otherwise complies with heat recovery per Section C403.9.5: Waste heat recovery (from SWH, process equipment, OR on-site renewable water-heating.	
6248 HVAC	C408.2.2.1	Mechanical	Air outlets and zone terminal devices have means for air balancing.	
6253 Testing	C408.2.3.2	Mechanical	HVAC control systems have been tested to ensure proper operation, calibration and adjustment of controls.	

6261 HVAC	C403.2.14, C403.2.14.1, C403.2.14.2	Mechanical	Commercial refrigerators, freezers, refrigerator-freezers and refrigeration equipment, defined in U.S. 10 CFR part 431.62, shall have an energy use in kWh/day not greater than the values of Table C403.2.14.1(1) when tested and rated in accordance with AHRI Standard 1200. Walk-in cooler and walk-in freezer refrigeration systems, except for walk-in process cooling refrigeration systems as defined in U.S. 10 CFR 431.302, shall meet the requirements of Tables C403.2.14.2(1), C403.2.14.2(2) and C403.2.14.2(3).	
4. To b	e checked by In	spector at Pi	roject Completion and Prior to Issua	ince of
