Subject: Elevator Installation

Romi

To have us install an elevator with 2 landings, 14' of travel and no machine room, with upgraded cab interiors you are looking at:

3500# elevator= \$70,000.00

2100# elevator= \$60,000.00

As you are installing this in an existing building you will need the following parties involved:

Architect

Structural Engineer

General Contractor- will need to hire several subs including us, electrician, fire alarm, someone to build the shaft

My best guess on the additional cost aside from the elevator price is between \$100,000 and \$175,000 depending on how everything is set up.

Please let me know if you need anything further.

Thanks,

Patrick Lalchandani | VP Construction and Mod
