Mo,

This is a beautiful piece of work, and I am so grateful you all took it on!

I only have a minor comment, take this for what you like:

1. When PDF says on page 2, "Such repairs require the notification of the Code (Building) Official and the issuance of a permit to perform the repairs."
 - a. Is this stating that the engineer noticing the repairs shall notify the Code Official at the time of the inspection, or that the commencement of repairs requires the notification? Clarification would be helpful here.
 - b. If it is the latter option, can the passage clarify, "The initiation of such repairs shall require the notification of the Code (Building) Official and the issuance of a permit to perform the repairs."

Best Regards,

Sorry, one more email.... I hesitated to write this because I missed the meetings where you all discussed these items so I am late to the game.

Is there a way to focus a few paragraphs on triggers for requiring shoring/evacuation of the building when an engineer feels a certain level of alarm. I saw nothing about what to do once damage is noticed, to keep the occupants safe before repairs commence. I didn't really know how to word that though, so I didn't include that in my comment list.

Best Regards,
