Subject: Doug Dorr's Proposal/Pool Bonding

Dear Commission,

I support Doug Dorr's Proposal on Equipotential Bonding of pool decks. The FSPA study was recently submitted to Code Making Panel 17 of the NFPA in an attempt to lower the level of safety but was soundly refuted, and the proposal rejected. Of particular note, the study claims to have followed IEEE standards, yet the Chair of IEEE Stray Voltage Group refuted it and demonstrated the flaws in that study.

Florida would be the only state LOWERING the level of safety from the NEC, and both the Electrical and Swimming Pool TAC's as well as the Commission itself, has been placed on notice by both IEEE and EPRI that the FSPA Study is flawed and does NOT prove a single wire provides adequate protection to prevent Stray and contact voltage injury as well as Electric Shock Drowning. Yet, Doug Dorr's proposal has conclusively proven a gridded mesh does.

Sincerely,

Reuben
