### Reference Test Report and Drawing:

American Test Lab, Inc. report number ATLNC-1104.01-09R dated 01/25/2010

Amarr Garage Doors drawing number IRC-6009-169-15-I dated 11/09/2009

### Description of Test Specimen:

Amarr Garage Door 9' x 7' 25 ga steel garage door Model # 600 Stratford 1000 as shown in drawing IRC-6009-169-15-I.

### Test Standards and Report Conclusion:

The above referenced Test Report states the following:

- The test was conducted in accordance with ASTM E330, E1996; and ANSI / DASMA 108 & 115
- The weight of the missile used for the Large Missile Impact test was 9 lbs.
- The door was operable before and after test
- The test was witnessed and certified by David Johnson, P.E. of Brevard, NC (FL PE #00061915)

### Summary:

The 9' x 7' Model 600 Stratford 1000 door as described on Drawing IRC-6009-169-15-I meets the testing criteria as described above. By comparison to the construction of the 9' x 7' Model 600 Stratford 1000, the following doors also meet the above testing criteria, when constructed in accordance with Drawing IRC-6009-169-15-I:

- Model 650 doors (which have the "Oak Summit" embossment pattern)
- Model 950 doors (which have thicker 24 ga. exterior skin)
- Stratford 1000 doors (which are Model 600), Oak Summit 1000 doors (which are Model 650), Heritage 1000 doors (which are Model 950)
- Stratford 2000, Oak Summit 2000, and Heritage 2000 doors (which have drop-in insulation)
- Model 600, 650, 950, Stratford 1000 & 2000, Oak Summit 1000 & 2000, and Heritage 1000 & 2000 doors with widths of up to 9' and heights of up to 14'.
- Short, Long, Flush, and Oak Summit Panels, which are alternate embossment patterns in the skin
- 4 short panel windows may be installed in 1 section (5/16" annealed laminated glass with .090" PVB interlayer)

To the best of my knowledge, the above garage door conforms to the requirements of the Florida Building Code 7th Edition (2020).
