	PROJECT: QUAKER C600/C605 and W600/605 Awning Windows	BY: TAD DATE: 10/18/23
	PROJECT NO.: Q5071.01-122-34	CKD: ARK SHEET: 2 OF 20

Scope

Architectural Testing, Inc., an Intertek company, was contracted by Quaker Windows & Doors to evaluate alternate installation methods for their C600/C605 and W600/W605 Awning Windows. The evaluation is based on physical testing and product certifications.

The analyses performed satisfy the methods and requirements of the following:

Florida Building Code, Building, 8th Edition (2023). International Code Council, 2023.

ADM-2020 Aluminum Design Manual. The Aluminum Association, Inc., 2020.

AAMA TIR-A9-14 Design Guide for Metal Cladding Fasteners, Includes 2020 Addendum. American Architectural Manufacturers Association, 2014.

AISI S100-16(2020) North American Specification for the Design of Cold-Formed Steel Structural Members, 2016 Edition (Reaffirmed 2020). American Iron and Steel Institute, 2020.

ICC-ES Report ESR-1976 ITW Buildex TEKS Self-Drilling Fasteners. ICC Evaluation Service. 01/2023.

GANA Glazing Manual, 50th Anniversary Edition

ANSI/AWC NDS-2018 National Design Specification (NDS) for Wood Construction with 2018 Supplement. American Wood Council, 2018.

The calculations presented herein are for the integrity of the window installations based on wind load only. The weather tightness of the installation is not addressed by this report. The air/water/structural performance of the individual products is not proven by this report.

	PROJECT: QUAKER C600/C605 and W600/605 Awning Windows	BY: TAD DATE: 10/18/23
	PROJECT NO.: Q5071.01-122-34	CKD: ARK SHEET: 3 OF 20

Certification of Independence

In accordance with Rule 61G20-3 Florida Administrative Code, Architectural Testing, Inc. hereby certifies the following:

- Architectural Testing does not have, nor does it intend to acquire or will it acquire, a financial interest in any company manufacturing or distributing products tested or labeled by the agency.
- Architectural Testing is not owned, operated or controlled by any company manufacturing or distributing products it tests or labels.
- Tanya A. Dolby, P.E. and Adam R. Kunkel do not have nor will acquire, a financial interest in any company manufacturing or distributing products for which the reports are being issued.
- Tanya A. Dolby, P.E. and Adam R. Kunkel do not have, nor will acquire, a financial interest in any other entity involved in the approval process of the product.

	PROJECT: QUAKER C600/C605 and W600/605 Awning Windows	BY: TAD DATE: 10/18/23

Analyses

Summary of Test Results

The following table summarizes the C600/C605 and W600/605 Awning Window products and their corresponding performance levels which have been established by testing or product certification.

Table 1 Summary of Test Results

Series/Model	Test Report Number	Product Certification	Size (W x H)	Performance
C600/C605 and W600/605 Awning	L0637.01-801-47 (Revision 2, 08/16/23)	NI014955-R1	72" x 48"	+/- 70 psf

L0637.01-801-47 testing was conducted by the Architectural Testing laboratory in Plano, Texas (Florida Department of Business & Professional Regulation Test Lab No. TST1910, IAS Accredited Laboratory TL-331).

As-Tested Installation Analysis

The specimen was secured to a 2x Spruce-Pine-Fir wood buck with #8 x 1-5/8" course thread wood/deck screws. The as-tested installation method is evaluated on page 8 and the established design capacity summarized in Table 2. Alternate anchorage is shown in Table 3 with on center spacings in Table 4 on page 6.

Table 2 As-Tested Anchorage Design Capacities

Installation	Connection	Capacity	Comments
Nailing Fin to Wood	#8 PH Wood Screw	86 lb	1. Limited by pull-over 2. 1 ½" minimum penetration 3. G = 0.55 Minimum SPF

The capacity presented in Table 2 will be used to prove acceptable alternate anchors and substrates for the windows.

	PROJECT: QUAKER C600/C605 and W600/605 Awning Windows	BY: TAD DATE: 10/18/23
	PROJECT NO.: Q5071.01-122-34	CKD: ARK SHEET: 5 OF 20

Anchorage Requirements

#8 x 1-5/8" course thread wood/deck screws actual test anchor capacity based on tested spacing:

Punched Opening Anchor Reactions

Roark's Formulas for Stress & Strain (Sixth Ed.) Table 26-1a

Design Pressure		70.0 psf					
Anchor Spacing		15.0 inch					
Window Mark	Width, w		Height, h	w/h	gamma	R	Anchor Capacity for Specified Spacing
	(inch)	(inch)					
	(inch)	(inch)					
L0637.01-801-47	72.00	48.00	1.50	0.485	11.32	170	
	48.00	48.00	1.00	0.420	9.80	147	

Calculated alternate anchors on the following pages are shown for 70 psf design pressure, #10 fasteners into wood and metal stud substrates.

The alternate anchorage conditions have design capacities which are comparable to or exceeds the least capacity of the as tested anchorage. All anchorage is installed 3" from corners and at the spacing calculated shown on pages 9 to 11 for 70 psf Design Load. Maximum shim space between the window frame and surrounding substrate is 1/4" for all conditions. Anchors must be fully shimmed and supported.

Glazing analysis for tested units is shown on pages 12 and 13. The glass Load Resistance was greater than or equal to the tested design pressures.

	PROJECT: QUAKER C600/C605 and W600/605 Awning Windows	BY: TAD DATE: 10/18/23
	PROJECT NO.: Q5071.01-122-34	CKD: ARK SHEET: 6 OF 20

Alternate Anchorages

Table 3 Alternate Anchorage Capacity – Nail Fin

Installation	Connection	Capacity	Comments
Nailing Fin to Wood	#10 PH Wood Screw	114 lb	1. Limited by pull-over 2. 1 ½" minimum penetration 3. G = 0.55 Minimum SYP
Nailing Fin to Wood	#10 Round Washer Head Wood Screw	178 lb	1. Limited by pull-over 2. 1 ½" minimum penetration 3. G = 0.55 Minimum SYP
Nailing Fin to Steel	#10 HWH TEKS Screw	128 lb	1. Limited by pull-out 2. Full penetration +3 threads 3. Min 18 gauge 33 KSI steel

Required Anchor Spacing at 70 psf Design Pressure

Anchorage Requirements

Although the capacities of the alternate anchorages exceed the capacity of the as-tested anchorage, it must be determined the anchorages are not overloaded for the approved window size and design pressures. Results are summarized in the following table.

Table 4 Nail Fin Anchorage Requirements

Substrate	Anchor	70 psf Casement 48" x 84" Anchor Spacing	
		Jambs	Head/Sill
Nailing Fin to Wood	#10-13 PH Wood Screw	12	10
	#10-13 Round Washer Head Wood Screw	18	16
Nailing Fin to Steel	#10 TEKS Screw	13	11

If the spacing reported in Table 4 exceeds the as-tested spacing reported in Table 2, the as tested spacing of 15" on center maximum shall govern.

TABLE 5—FASTENER STRENGTH OF SCREWS^{1, 2, 3, 4, 5}

SCREW DESIGNATION	DIAMETER (in.)	ALLOWABLE FASTENER STRENGTH		NOMINAL FASTENER STRENGTH	
		Tensile, P_{ts}/Ω (lbf)	Shear, P_{ss}/Ω (lbf)	Tensile, P_{ts} (lbf)	Shear, P_{ss} (lbf)
10-16	0.190	885	573	2654	1718
12-14	0.216	1184	724	3551	2171
12-24	0.216	1583	885	4750	2654
¹ / ₄ -14	0.250	1605	990	4816	2970
¹ / ₄ -28	0.250	1922	1308	5767	3925

For **SI**: 1 inch = 25.4 mm, 1 lbf = 4.45 N.

¹For tension connections, the least of the allowable pull-out, pullover, and fastener tension strength found in Tables 2, 3, and 5, respectively, must be used for design.

²For shear connection, the lower of the allowable shear (bearing) and the allowable fastener shear strength found in Table 4 and 5, respectively, must be used for design.

³See Section 4.1 for fastener spacing and end distance requirements.

⁴Nominal strengths are based on laboratory tests

⁵To calculate LRFD values, multiply nominal strength values by the LRFD Φ factor of 0.5.

	Over 2.75"						± 0.09						

Description	An externally threaded fastener with a dome-shaped head, cross recess and a single lead thread. The shank has a reduced diameter and a chip cavity cut out where the final several threads end at the tip.	
Applications / Advantages	The deeper thread design offers greater resistance to pull-out forces. Popular in fastening cabinet hardware in locations that do not require the head to countersink. The chip cavity (or auger point) are designed to attach hinges to the edge of hardwood face frames.	Used in environments where corrosion resistance is necessary. The type-17 point enables the screw to more easily penetrate the material into which it's fastened. Can be used in particle board, wood and some plastics.
Material	C1018 - 1022 case-hardened steel	18-8 Stainless Steel
Surface Hardness	Vickers 450 HV minimum	-
Case Depth	0.004" - 0.009"	-
Torque	See values in above table	-
Plating	See Appendix-A for plating information	Stainless deep thread screws are usually supplied without additional finish.

Description	An externally threaded fastener with a dome-shaped head and an integrally formed washer; a recess that can accommodate either a Phillips or Square screwdriver; and a single lead thread. The shank has a reduced diameter and a chip cavity cut out where the final several threads, ending at the tip.
Applications / Advantages	The deeper thread design offers greater resistance to pull-out forces. The chip cavity (or auger point) enables the fastener to drive—especially in denser woods—without pre-drilling a pilot hole. The head offers a greater bearing surface than a countersunk design. Used to attach surface-mounted door hinges or master lock hasps into dense woods or when attaching two pieces of wood through a pocket hole.
Material	C1022 case-hardened steel
Surface Hardness	Rockwell C 45 minimum
Case Depth	0.004" - 0.009"
Torque	#8 Diameter: 35 kg/cm minimum #10 Diameter: 50 kg/cm minimum
Plating	See Appendix-A for plating information

SELF-TAPPING SCREWS
