Evaluation Report for Clopay Building Products Company Sectional Residential Garage Doors, W3 through W6

I have evaluated the wind load door designs as shown on the drawings listed below. I have reviewed the test reports, which were generated by accredited independent laboratories as required by 9B-72.070(4), the engineering rational analysis, and the product drawings. The test reports are listed below.

For the doors in Tables 1 through 21, the tests were conducted in accordance with ASTM-E330-2002 and ANSI/DASMA 108-2002/2005. The pressures listed on the drawings are either direct results of these tests or results obtained through engineering rational analysis based on actual tests. I have concluded that the door designs listed below in Tables 1 through 21 are in compliance with the test requirements of the 2007 Florida Building Code Section 1714.5.3.1.

For the doors listed in Tables 22 through 35, Static Pressure Tests were conducted in accordance with ASTM-E330-2002 and ANSI/DASMA 108-2002/2005 and/or TAS 202. Missile Impact and Cyclic Pressure Tests were conducted in accordance with ANSI/DASMA 115-2002/2005 and/or TAS 201 and TAS 203. The pressures listed on the drawings are either direct results of these tests or results obtained through engineering rational analysis based on actual tests. I have concluded that the door designs listed below in Tables 22 through 35 are in compliance with the High Velocity Hurricane Zone test requirements of the 2007 Florida Building Code Sections 1714.5.3.1, 1625 and 1626 and therefore are qualified as impact-resistant assemblies.
